COMPENG 2SH4 Project – Statement of Contribution

Your Group Name   Control+Alt+Elite

Your Name   Stefan Risca

Your Team Member's Name   Eric Witehead

You must complete this statement of contribution without discussing it with your project partner, i.e., individually. Your statement should be concise (at most one-and-a-half page). It has three parts:

1. Tell us about your own contribution to the development of your COMPENG 2SH4 project. For example, you can tell us about which project iterations (as mentioned in the project manual) and C++ project classes that you worked on and completed. You can provide a concise answer either in paragraph form or through bullet points.

Summary of parts I completed individually:

- Iteration 1A
- Iteration 2A

Summary of parts I worked on together with my teammate:

- Iteration 3

2. Repeat Part 1 above but this time tell us about your project partner's contribution to the development of your COMPENG 2SH4 project.

Summary of parts my partner completed individually:

- Iteration 1B
- Iteration 2B
- Iteration 0

Summary of parts my partner completed together with me:

- Iteration 3

3. Tell us about your experience in your first collaborated software development through this project – what was working and what wasn't. If you are a one-person team, tell us what you think may work better if you had a second collaborator working with you.

The overall experience was good, and it was especially handy to be working together to synthesize and debug code in iteration 3, which did contain the hardest concepts. We would also review our individual tasks together after they were completed to ensure that we both understood the entire code, and we could also spot small bugs in each other's code.

The only downside to working with separate tasks was needing to make sure both partners completed iteration 1 before moving to iteration 2, and if the partners can code at different paces, it may be a little bit frustrating for the other teammate.
